  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score

Patent No. 6914128
GENERAL INFORMATION:
APPLICANT: Jochen, Salfeld et al.
TITLE OF INVENTION: Human Antibodies That Bind Human IL-12 And Methods For Producing FILE REFERENCE: BBI-093CP
CURRENT APPLICATION NUMBER: US/09/534,717
CURRENT FILING DATE: 2000-03-24
EARLIER APPLICATION NUMBER: 60/126,603
EARLIER FILING DATE: March 25, 1999
NUMBER OF SEQ ID NOS: 675
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 624
                                                                                                                                                             APPLICANT: Jochen, Salfeld et al.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                         seqid 153
```

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone 25, C35, C35, 1C6, 3D12, B4, 1F3, huC25, A1, Ar2, WR1(V), WR1(T), 3-1, 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum neurotoxin type A (BoNT/A). Also described are: a polypeptide (II) comprising BoNT/A neutralising epitope having an epitope that is

New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated with botulinum neurotoxin poisoning.

Example 4; SEQ ID NO 153; 110pp; English

WPI; 2004-652009/63.

Marks JD,

Amersdorfer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several anticodies botulinum neurotoxin antibodies, where each antibody is specific for a clifferent epitope of a botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies comprising (I); and a kit comprising (I) is useful for neutralising comprising (I); and a kit comprising (I) is useful for neutralising comprising (I) is useful for neutralising a botulinum neurotoxin which compressed the comprising (I) is useful for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the combination of antibodies shows greater toxin neutralisation than the combination of antibodies shows greater toxin neutralisation than the combination of antibodies associated with botulinum neurotoxin cor for treating pathologies associated with botulinum neurotoxin cor poisoning. (I) exhibits specificity and affinity towards BoNT/A. (I) combles rapid detection or diagnosis of botulism. This is the amino acid correction of mouse heavy chain anti-BoNT-antibody CDR2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
```

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BONT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone S25, C25, C39, 1C6, 3D12, B4, 1F3, huC25, Ar1, Ar2, WR1(Y), WR1(T), 3-1, 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          멼
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc comprising BoNT/A neutralising epitope having an epitope that is comprising BoNT/A neutralising epitope having an epitope that is cc specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (II) comprising several anticc botulinum neurotoxin antibodies, where each antibody is specific for a cdifferent epitope of a botulinum neurotoxin and the combination of comprising (I); and a kit comprising (I). (I) is useful for neutralising comprising (I); and a kit comprising (I). (I) is useful for neutralising comprising (I) antibody and for neutralising a botulinum neurotoxin which comprising (I) antibody and for neutralising a botulinum neurotoxin which comprising (I) is surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the compitation of antibodies shows greater toxin neutralisation than the compitation of antibodies shows greater toxin neutralisation than the ccompitation of antibodies associated with botulinum neurotoxin and the compitation of antibodies associated with botulinum neurotoxin (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin (I) consisting (I) enables rapid detection or diagnosis of botulism. This is the amino acid consisted with the compiles as the amino acid sequence of mouse heavy chain anti-BoNT-antibody CDR2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   श्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC 325, C25, C39, 1C6, 3D12, B4, 1F3, huC25, Ar1, Ar2, WR1(Y), WR1(T), 3-1, CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum CC neurotoxin type A (BoNT/A). Also described are: a polypeptide (II) CC comprising BoNT/A neutralising epitope having an epitope that is comprising BoNT/A neutralising epitope having an epitope that is comprising BoNT/A neutralising epitope having an epitope that is cotulinum neurotoxin antibodies, where each antibody is specific for a different epitope of a botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. The following are disclosed: a pharmaceutical composition comprising (I); and a kit comprising (I). (I) is useful for neutralising BoNT/A antibody and for neutralising abculinum neurotoxin which involves contacting neurotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism correction of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism correction of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism correction of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism correction of antibodies associated with botulinum neurotoxin and the polsoning. (I) exhibits specificity and affinity towards BoNT/A. (I) canables rapid detection or diagnosis of botulism. This is the amino acid correction of mouse heavy chain anti-BoNT-antibody CDR2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
```

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A.

The invention describes an isolated antibody (I) that specifically binds

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC (BONT/A). An isolated antibody (I) that specifically binds to an epitope CC specifically bound by an antibody expressed by a clone chosen from clone CS 25, C25, C39, IC6, 3D12, B4, IF3, huC25, Ar1, Ar2, WR1(V), WR1(T), 3-1, CC comprising bold in ING1, where (I) binds to and neutralizes botulinum CC neurotoxin type A (BONT/A). Also described are: a polypeptide (II) CC specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several anticed different epitope of a botulinum neurotoxin antibodies, where dach antibody is specific for a cdifferent epitope of a botulinum neurotoxin and the combination of CC antibodies shows greater toxin neutralisation than the single antibodies in surplus. The following are disclosed: a pharmaceutical composition CC comprising (I); and a kit comprising (I) il is useful for neutralising BONT/A antibody and for neutralising a botulinum neurotoxin which CC involves contacting neurotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin (I) canables rapid detection or diagnosis of botulism. This is the amino acid sequence of mouse heavy chain anti-BoNT-antibody CDR2.

An isolated antibody (I) that specifically binds to applicable specifically bound by an antibody expressed by a clone chosen from clone S25, C25, C39, IC6, 3D12, B4, IF3, huC25, A1, A2, WR1(V), WR1(T), 3-1, C3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum CC comprising BONT/A neutralising epitope having an epitope that is CC specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several anti-CC producing (I); and a composition (III) comprising several anti-CC different epitope of a botulinum neurotoxin antibodies, where each antibody is specific for a CC different epitope of a botulinum neutrotoxin and the combination of CC antibodies shows greater toxin neutralisation than the single antibodies in surplus. The following are disclosed: a pharmaceutical composition CC comprising (I); and a kit comprising (I). (I) is useful for neutralising CC solution and affinity towards bont/A. (I) is specific for a different epitope of the botulinum neurotoxin which CC involves contacting neurotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin than the CC single antibodies shows greater toxin neutralisation than the CC single antibodies in surplus. (I) is useful for diagnosing the botulism CC or for treating pathologies associated with botulinum neurotoxin (I) composition or diagnosis of botulism. This is the amino acid composition or diagnosis of botulism. This is the amino acid composition or diagnosis of botulism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

Also included are a CC polypeptide comprising BONT/A neutralising epitope comprising an epitope CC which is specifically bound by the antibody where the polypeptide is not CC a full-length botulinum neurotoxin H_C fragment and making an anti-BONT/A (CC an epitope specifically bound by an antibody expressed by any of the CC epitope). The antibody is useful for neutralising a BONT/A, by contacting between antibody any of the CC epitope). The antibody is useful for neutralising a BONT/A, by contacting botulinum neurotoxin type A with the antibody comprising VH CDR (heavy CC chain variable region complementarity determining region) and with a CC second anti-BONT/A antibody which comprises a VH CDR, where the second CC antibody binds to a different epitope than the first anti-BONT/A CC antibody. The antibody is useful in the treatment of pathologies CC associated with botulinum neurotoxin poisoning, for rapid detection/diagnosis of botulism and in the detection and/or quantification of BONT/A in a biological sample obtained from an organism. The present sequence is a heavy chain variable region (VH) of a single chain antibody (scFv) of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A

Example 1;

SEQ ID NO 59; 110pp; English.

New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated with botulinum neurotoxin poisoning.

An isolated antibody (I) that specifically binds to an epitope CC specifically bound by an antibody expressed by a clone chosen from clone CS 25, C25, C39, IC6, 3D12, B4, IF3, huC25, Ar1, Ar2, WR1(Y), WR1(T), 3-1, CC comprising BONT/A neutralising epitope dare: a polypeptide (II) CC specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several anticc different epitope of a botulinum neurotoxin antibodies, where each antibody is specific for a CC different epitope of a botulinum neurotoxin and the combination of CC comprising (I); and a kit comprising (I) is useful for neutralising a comprising (I); and a kit comprising (I) is useful for neutralising a botulinum neurotoxin which CC comprising (I); and a kit comprising a botulinum neurotoxin which CC involves contacting neurotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin composition or diagnosis of botulism. This is the amino acid equence of a mouse heavy chain variable fragment anti-botulinum toxin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific CC clone where (I) binds to and neutralises botulinum neurotoxin type A CC (BONT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone CC specifically bound by an antibody expressed by a clone chosen from clone CC comprising BONT/A neutralising epitope having an epitope that is specifically bound by an antibody expressed by a clone as mentioned in (I) comprising BONT/A neutralising epitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several anticce of insurplus. The following are disclosed; where each antibody is specific for a different epitope of a botulinum neurotoxin antibodies in surplus. The following are disclosed; a pharmaceutical composition (CC involves contecting neurotoxin with (I) is useful for neutralising a botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the combination of antibodies shows greater toxin neutralisation than the combination of antibodies shows greater toxin neutralisation than the CC single antibodies in surplus. (I) is useful for neutralism cc or for treating pathologies associated with botulinum neurotoxin than the cc single antibodies in surplus. (I) is useful for diagnosing the botulism cc or lower of a mouse heavy chain variable fragment anti-botulinum toxin accide combines of a mouse heavy chain variable fragment anti-botulinum toxin accide combines of a mouse heavy chain variable fragment anti-botulinum toxin accide composition of antibodies heavy chain variable fragment anti-botulinum toxin accide combines of a mouse heavy chain variable fragment anti-botulinum toxin accide composition of a mouse heavy chain variable fragment anti-botulinum toxin accide composition of a mouse heavy chain variable 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

Sequences are provided for mouse 022 VH (AAR54931), humanized NEWM-based VH (022 KUVH, AAR54929), humanized KOL-based VH (022 KUVH, AAR54930), mouse 022 VK (AAR54933) and humanized REI-based VK (022 HUVK, AAR54933)

During hab production, VH and VK cDNAs were PCR amplified using primers given in AAQ65378-87. Mutagenesis of clone M13VHPCR2 KOL VH (L71R) was performed using oligos AAQ65388-89. The habs can be used in heteroantibody, bifunctional antibody and immunocoxin production. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 27-AUG-2003 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Humanized antibodies (hAbs) for IgG Fc receptors on human phagocytes comprise the CDR of mouse monoclonal antibody 22 (from hybridoma 022WCL-1), VH chains from human Igs NEWM or KOL, and VK chains from Ig REI.

Sequences are provided for mouse 022 VH (AAR54931), humanized NEWM-based VH (022 KUVH, AAR54929), humanized KOL- based VH (022 KUVH, AAR54930), mouse 022 VK (AAR54933) and humanized REI- based VK (022 KIVH, AAR54930).

During hab production, VH and VK CDNAs were PCR amplified using primers given in AAQ6538-97. Mutagenesis of clone M13VHPCR2 KOL VH (L71R) was performed using oligos AAQ65388-89. The hAbs can be used in heteroantibody, bifunctional antibody and immunotoxin production. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 27-AUG-2003 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CDR; complementarity determining region; VH; heavy chain variable region; VK; kappa chain variable region; mononuclear phagocyte; PCR; polymerase chain reaction; primer; site-directed mutagenesis;
Humanized antibodies (hAbs) for IgG Fc receptors on human phagocytes comprise the CDR of mouse monoclonal antibody 22 (from hybridoma 022WCL-1), VH chains from human Igs NEWM or KOL, and VK chains from Ig REI. Sequences are provided for mouse 022 VH (AAR5491), humanized NDL-based VH (022 NMVH, AAR54929), humanized KOL-based VH (022 KLVH, AAR54930), mouse 022 VK (AAR54933) and humanized REI-based VK (022 KUVK, AAR54930). During hab production, VH and VK CDNAs were PCR amplified using primers given in AA65378-87. Mutagenesis of clone M13VHPCR2 KOL VH (L71R) was performed using oligos AAQ65388-89. The hAbs can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fc receptor; FcR; humanized antibody; hAb; IgG; cancer; allergy; autoimmune disease; heteroantibody; bifunctional antibody; immunotoxin;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 heteroantibody, bifunctional antibody add immunotoxin production. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                      The present invention relates to humanised anti-lymphotoxin beta receptor (LT-beta-R) antibodies. These are derived from the murine LT-beta-R binding antibody CBE11 and can be used to treat neoplasia in humans. The present sequence is the murine CBE11 heavy chain variable region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New humanized anti-lymphotoxin-beta receptor antibody, useful for treating or reducing the advancement, severity or effects of neoplasia, particularly solid tumors (i.e. carcinomas) including colorectal cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  13-OCT-2000; 2000US-0240285P
